

New Collab – Design Workshop

A design workshop to brainstorm on possible designs and layout of the new Collab service, based on the analysis of the requirements.

Where are we?

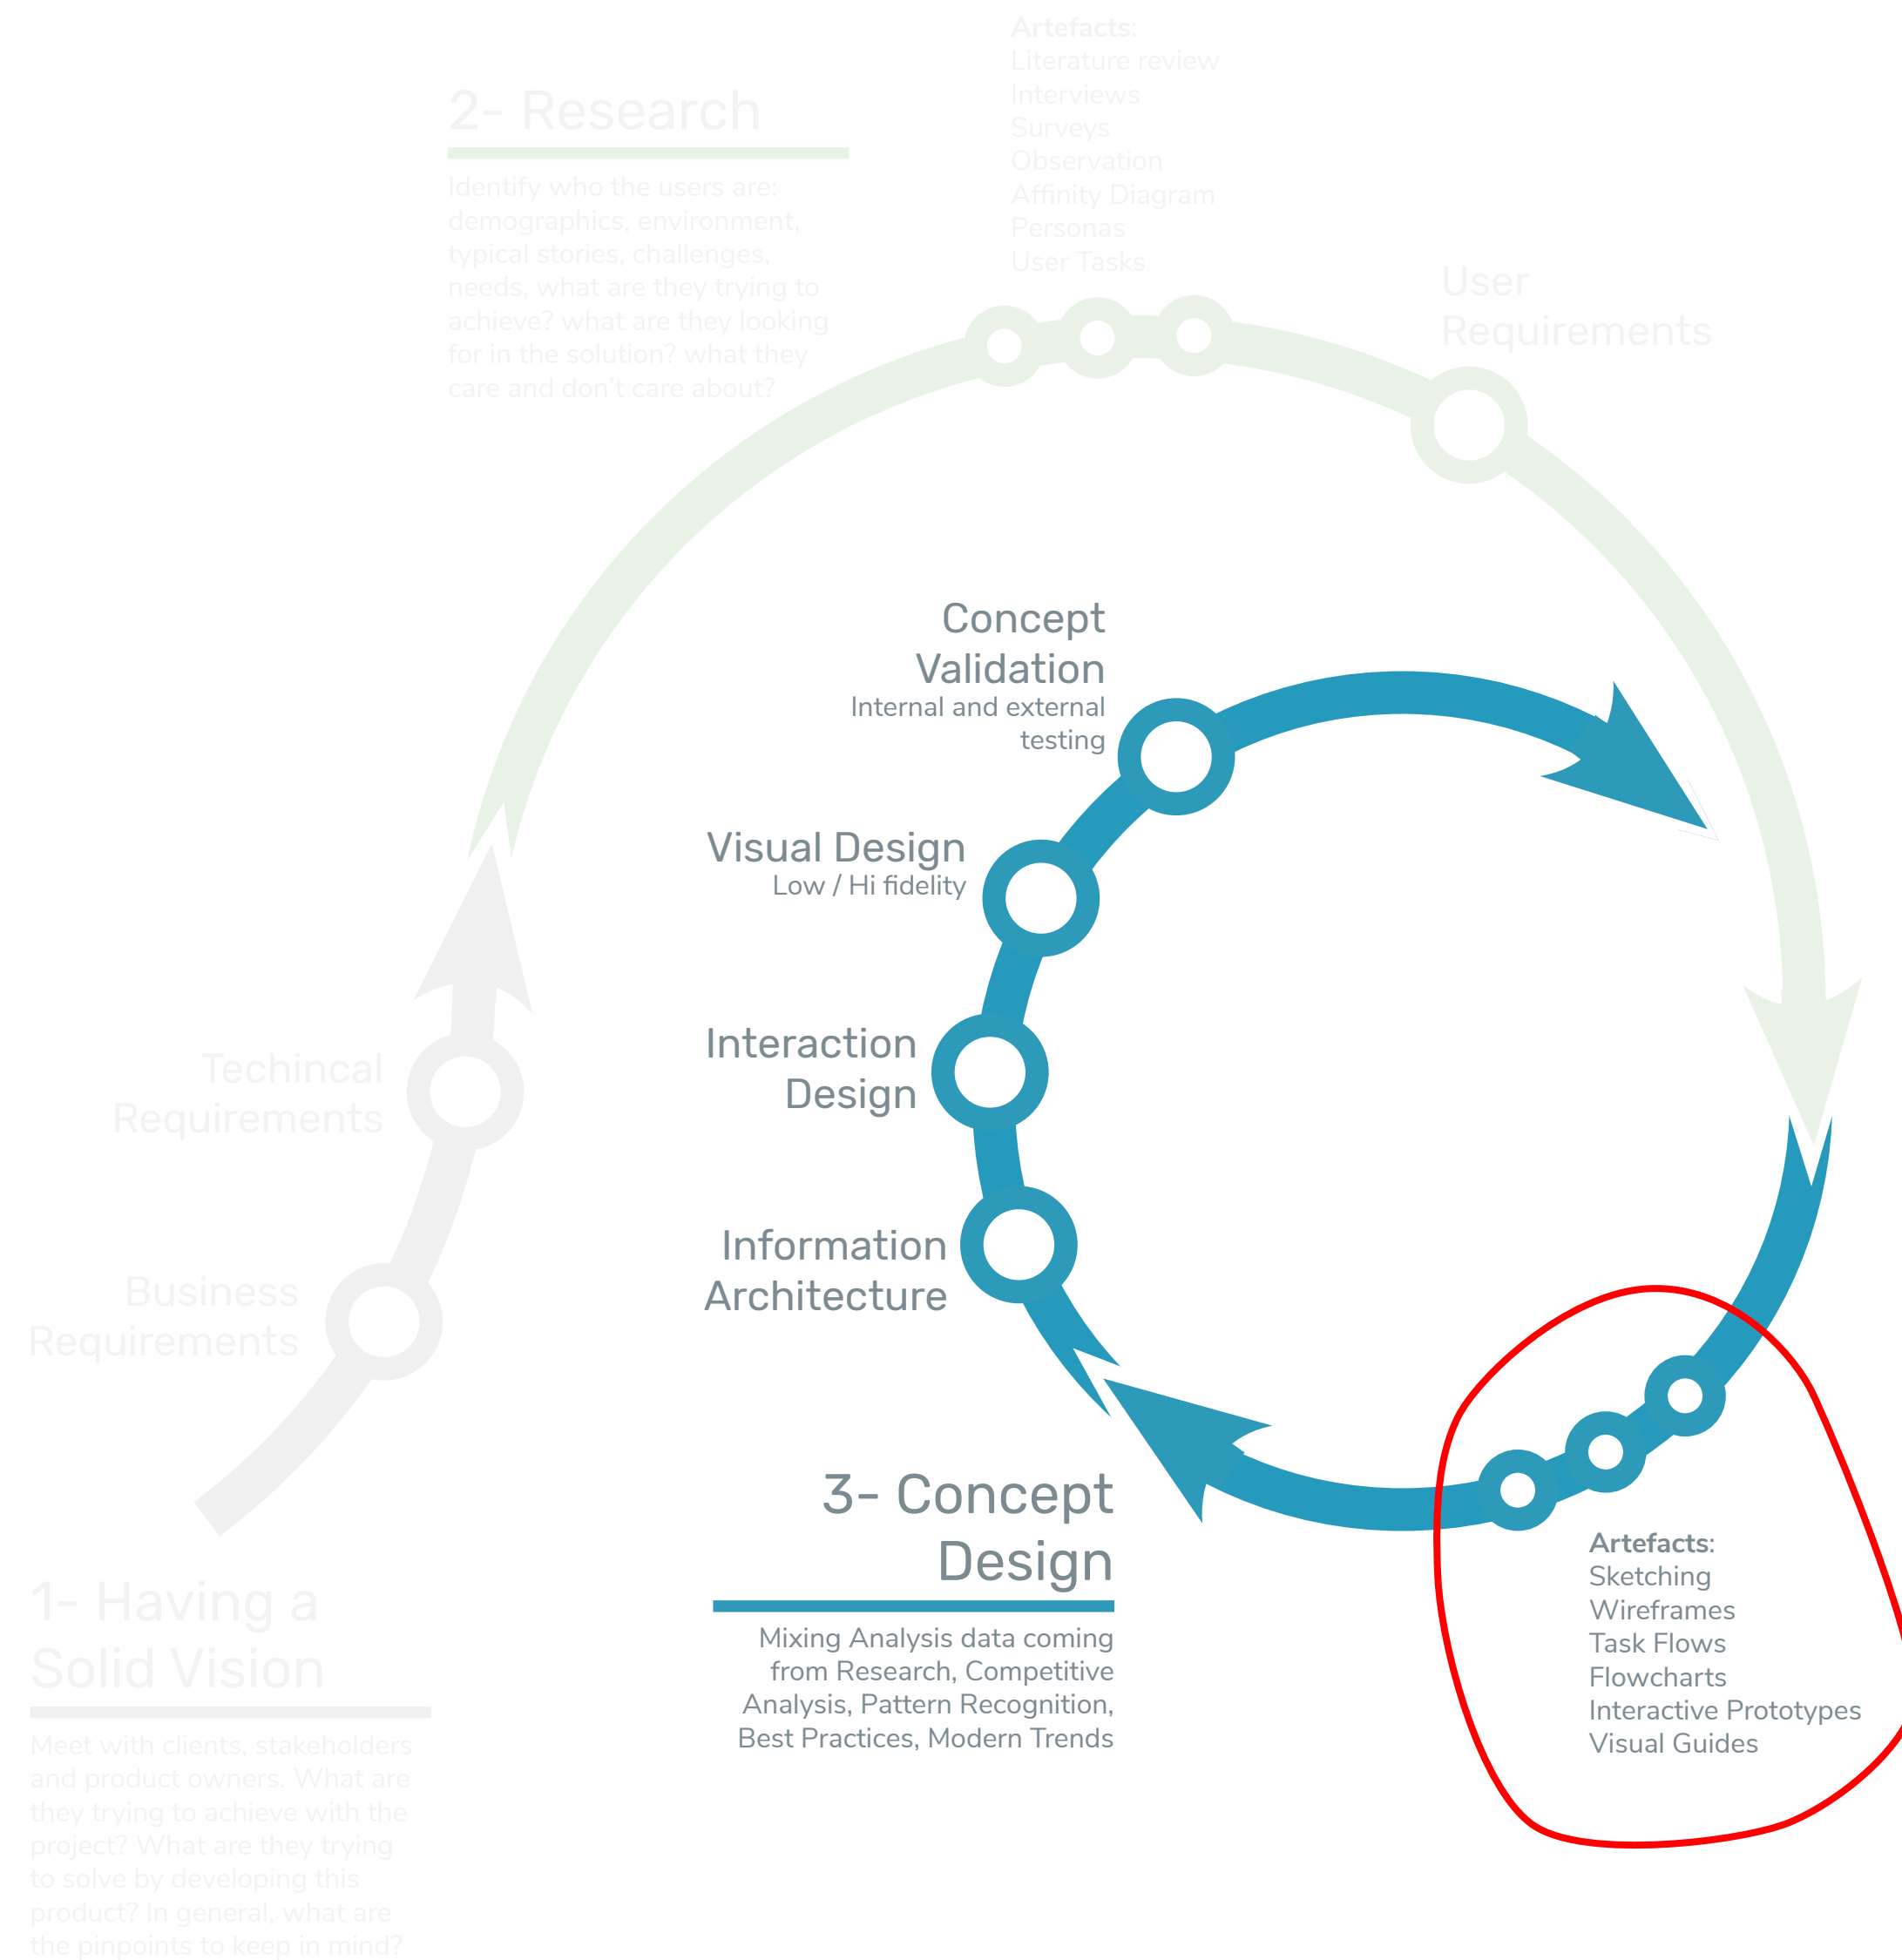

Let's remember that:

UNCLASSIFIED / NON CLASSIFIÉ

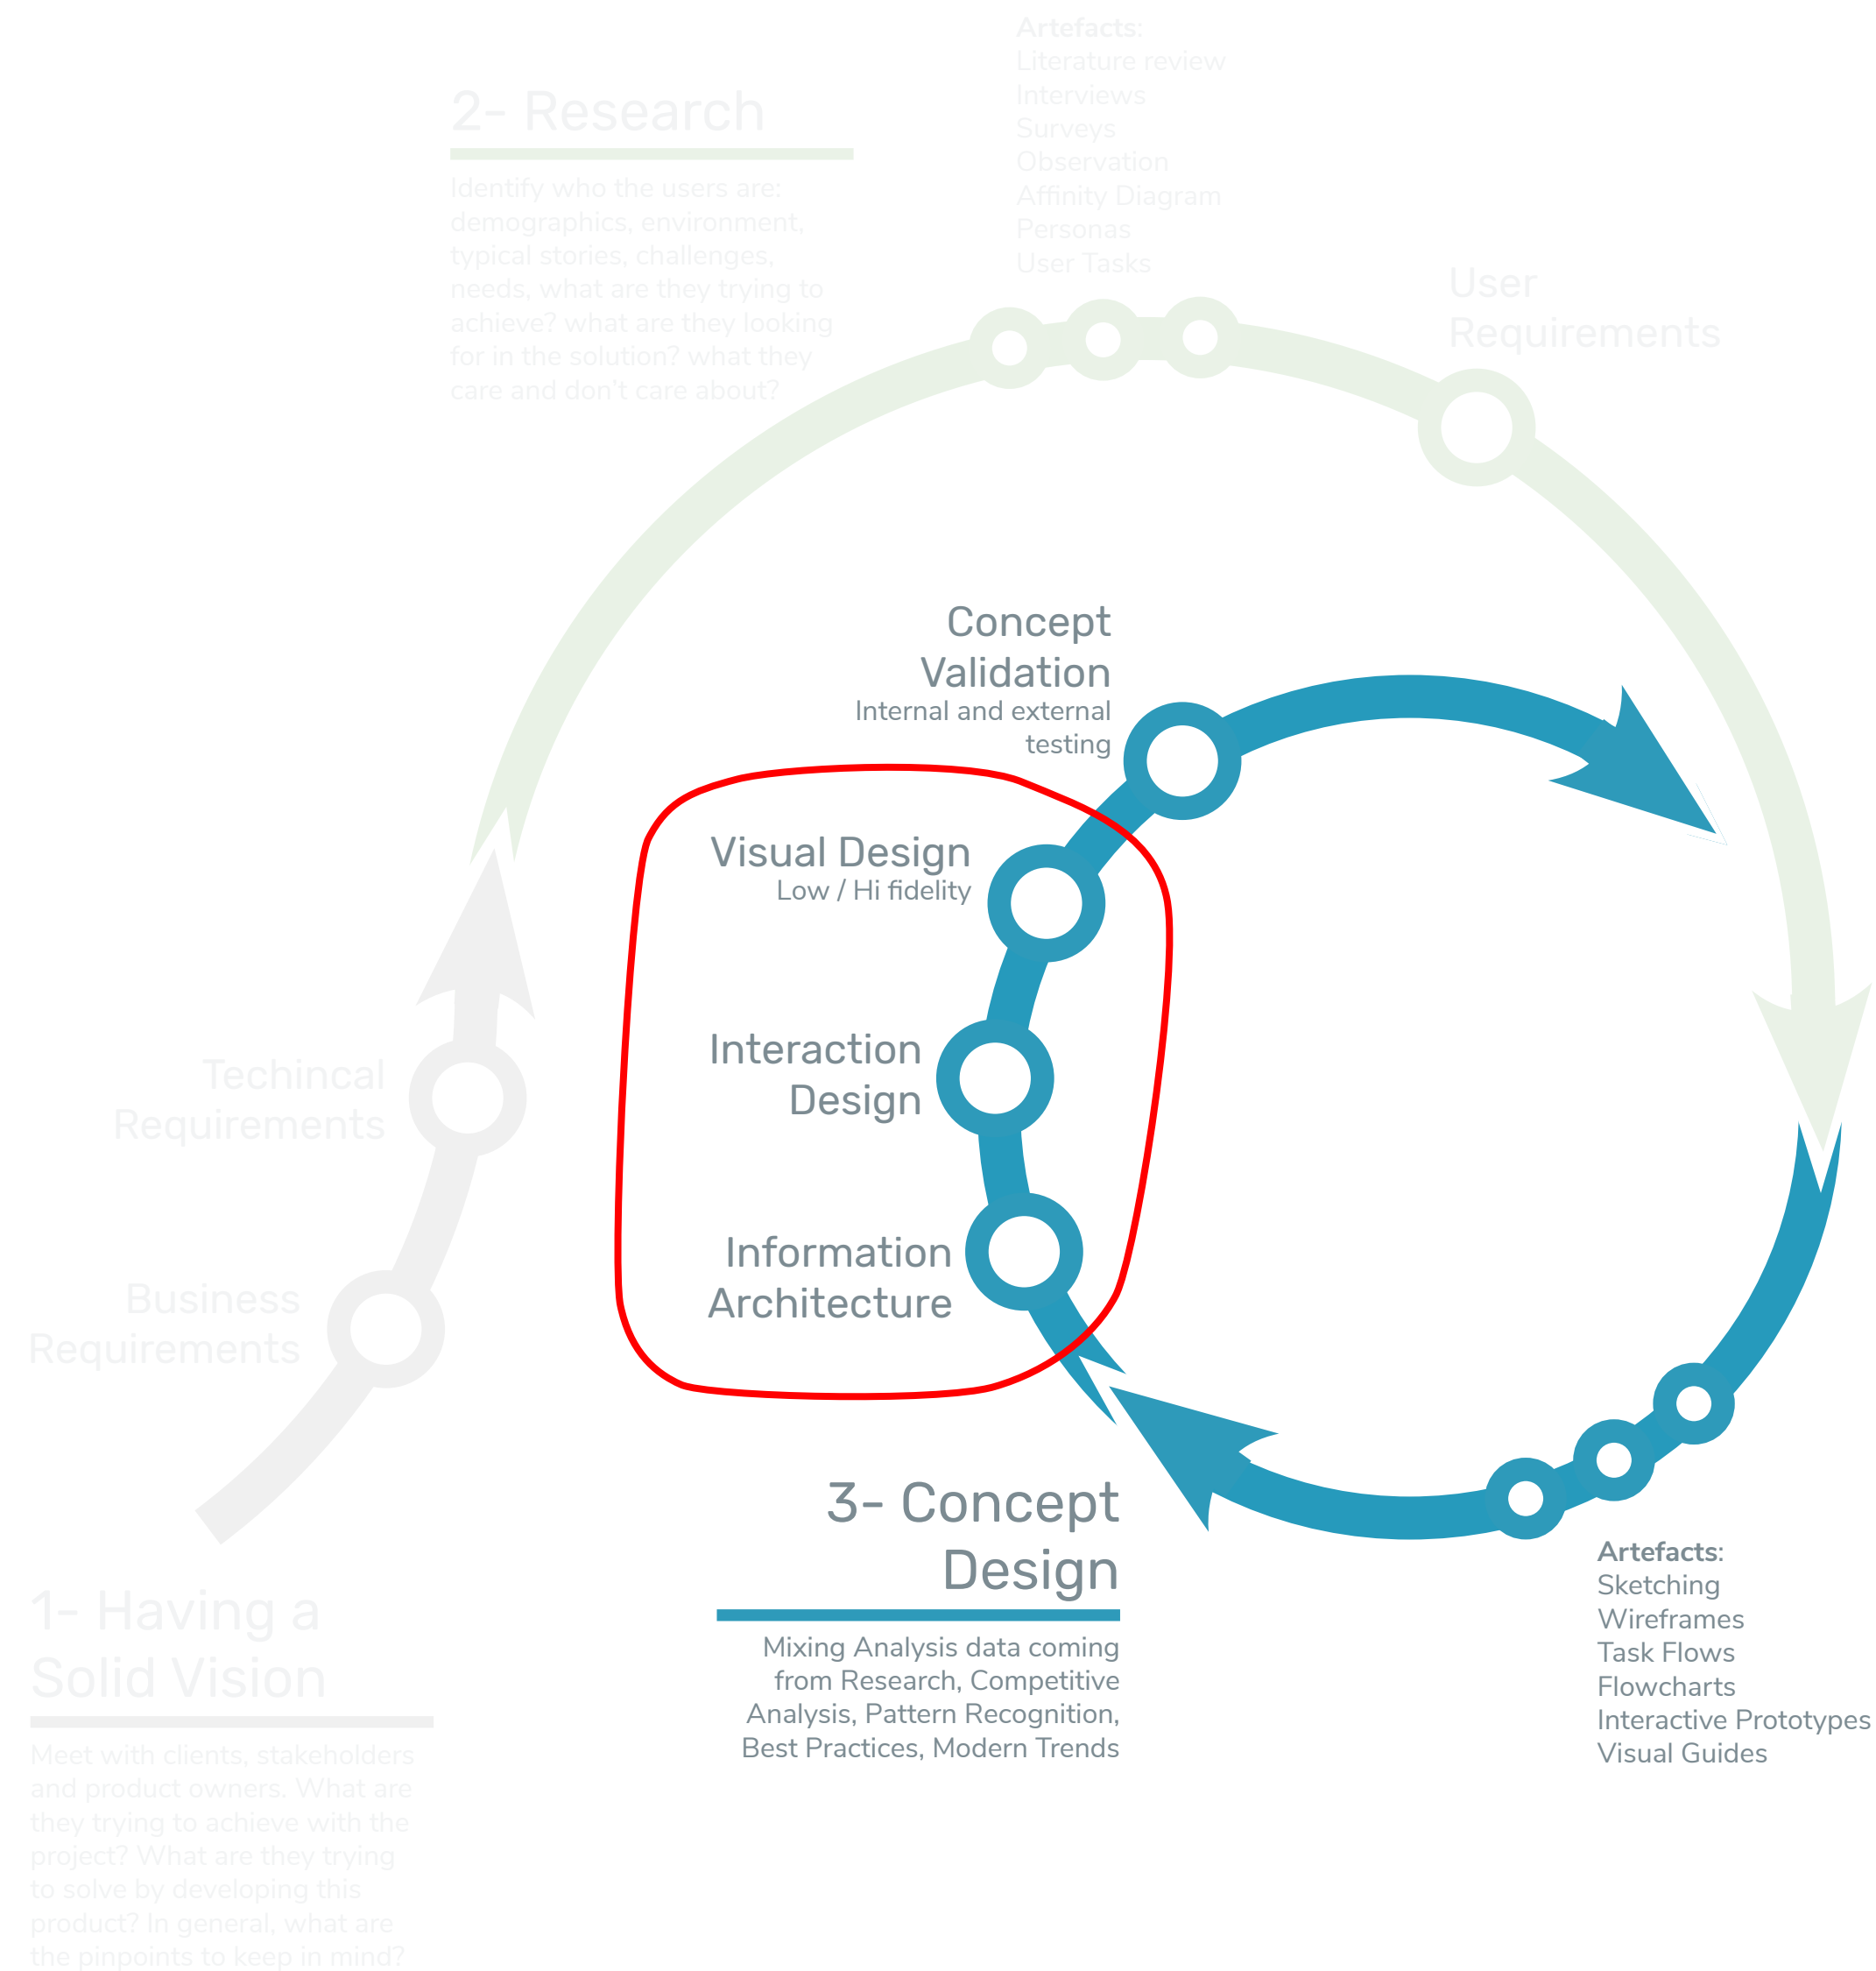

Let's remember that:

Artifacts are in general “devices built with different pieces for a specific use”, in our case, they are **constructs used to help the design process** in obtaining specifications of a given solution.

Artefacts:
 Sketching
 Wireframes
 Task Flows
 Flowcharts
 Interactive Prototypes
 Visual Guides

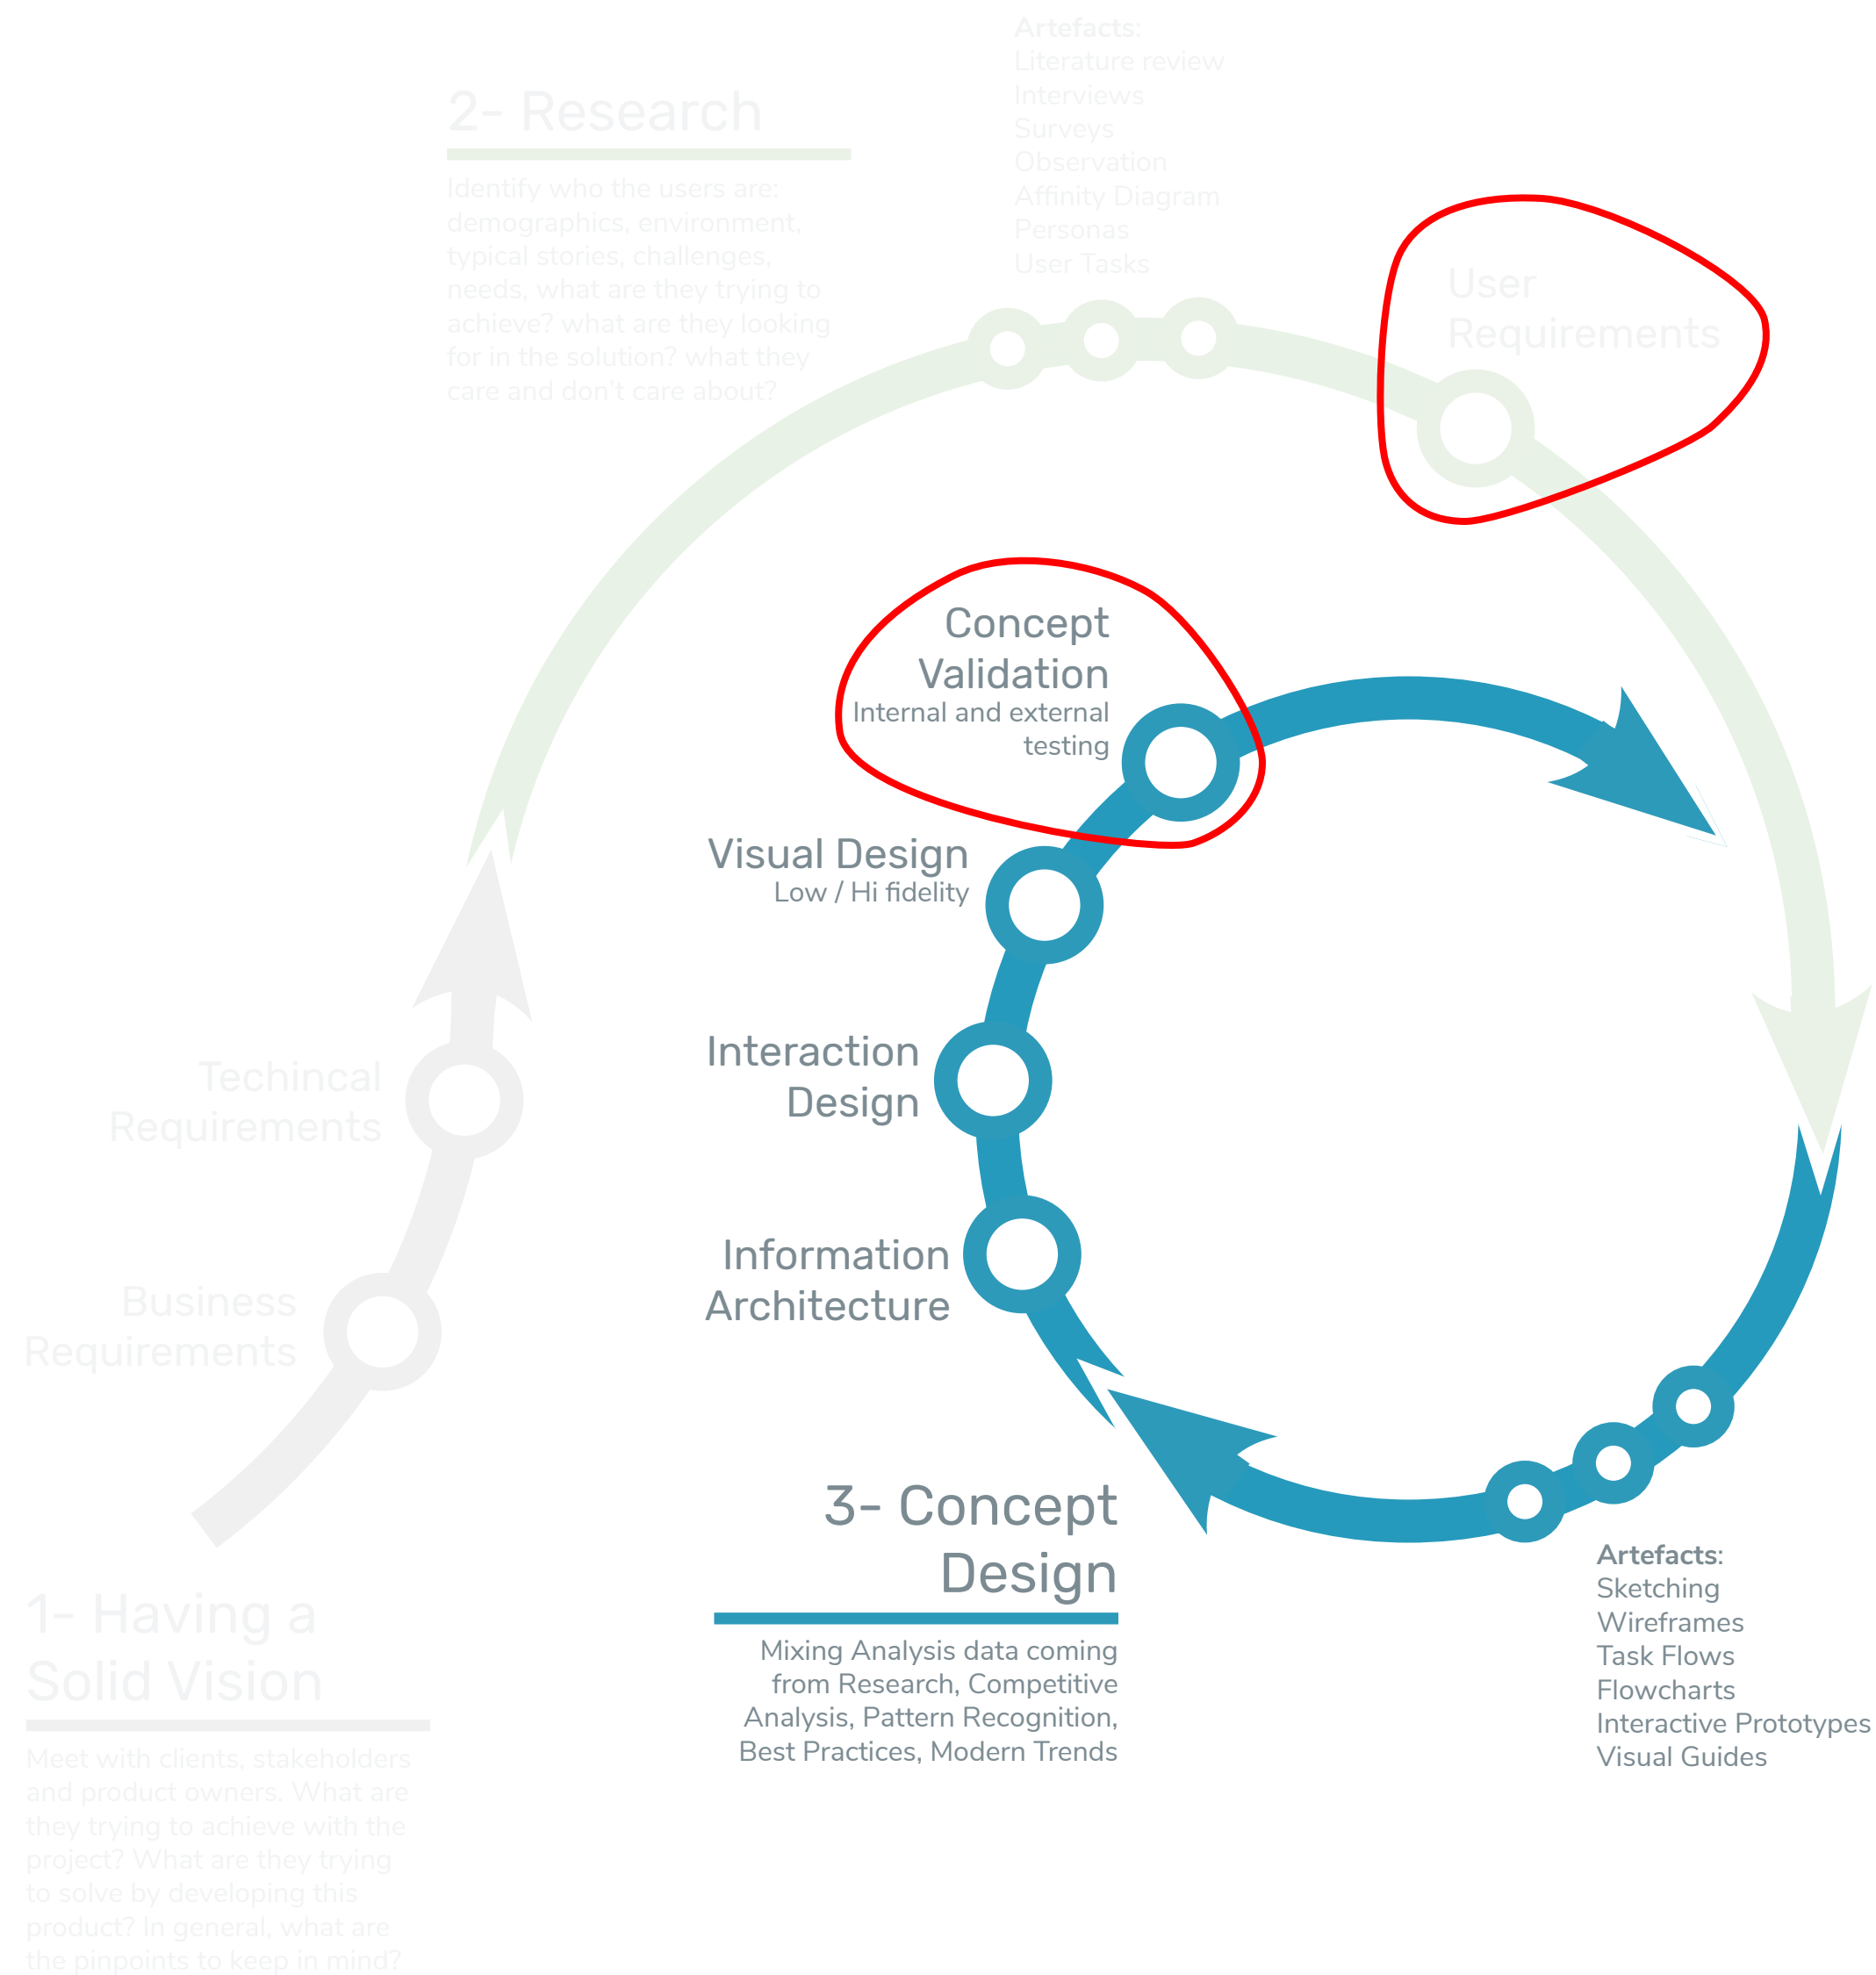

Let's remember that:

Artifacts are in general “devices built with different pieces for a specific use”, in our case, they are **constructs used to help the design process** in obtaining specifications of a given solution.

It doesn't matter which artifacts we use or in what order as long as we succeed in obtaining at the end a clear definition of the design deliverables:

- **Information Architecture**
- **Interaction Design**
- **Visual Design.**

Let's remember that:

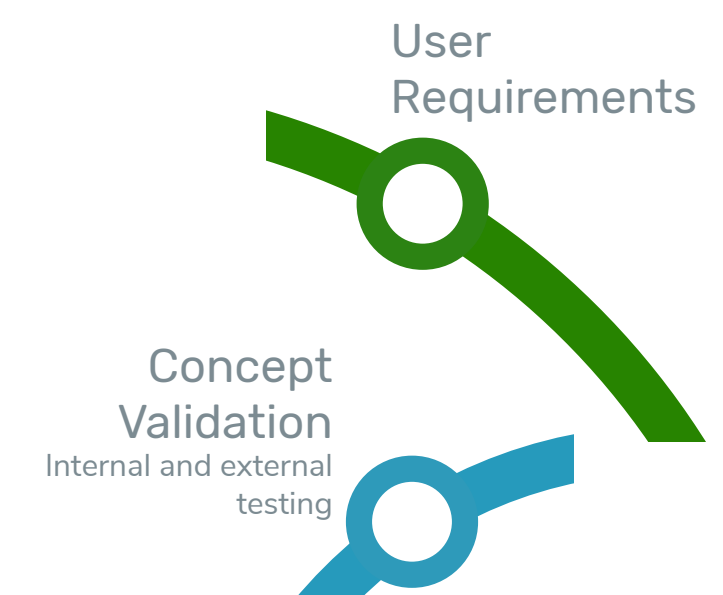

Artifacts are in general “devices built with different pieces for a specific use”, in our case, they are **constructs used to help the design process** in obtaining specifications of a given solution.

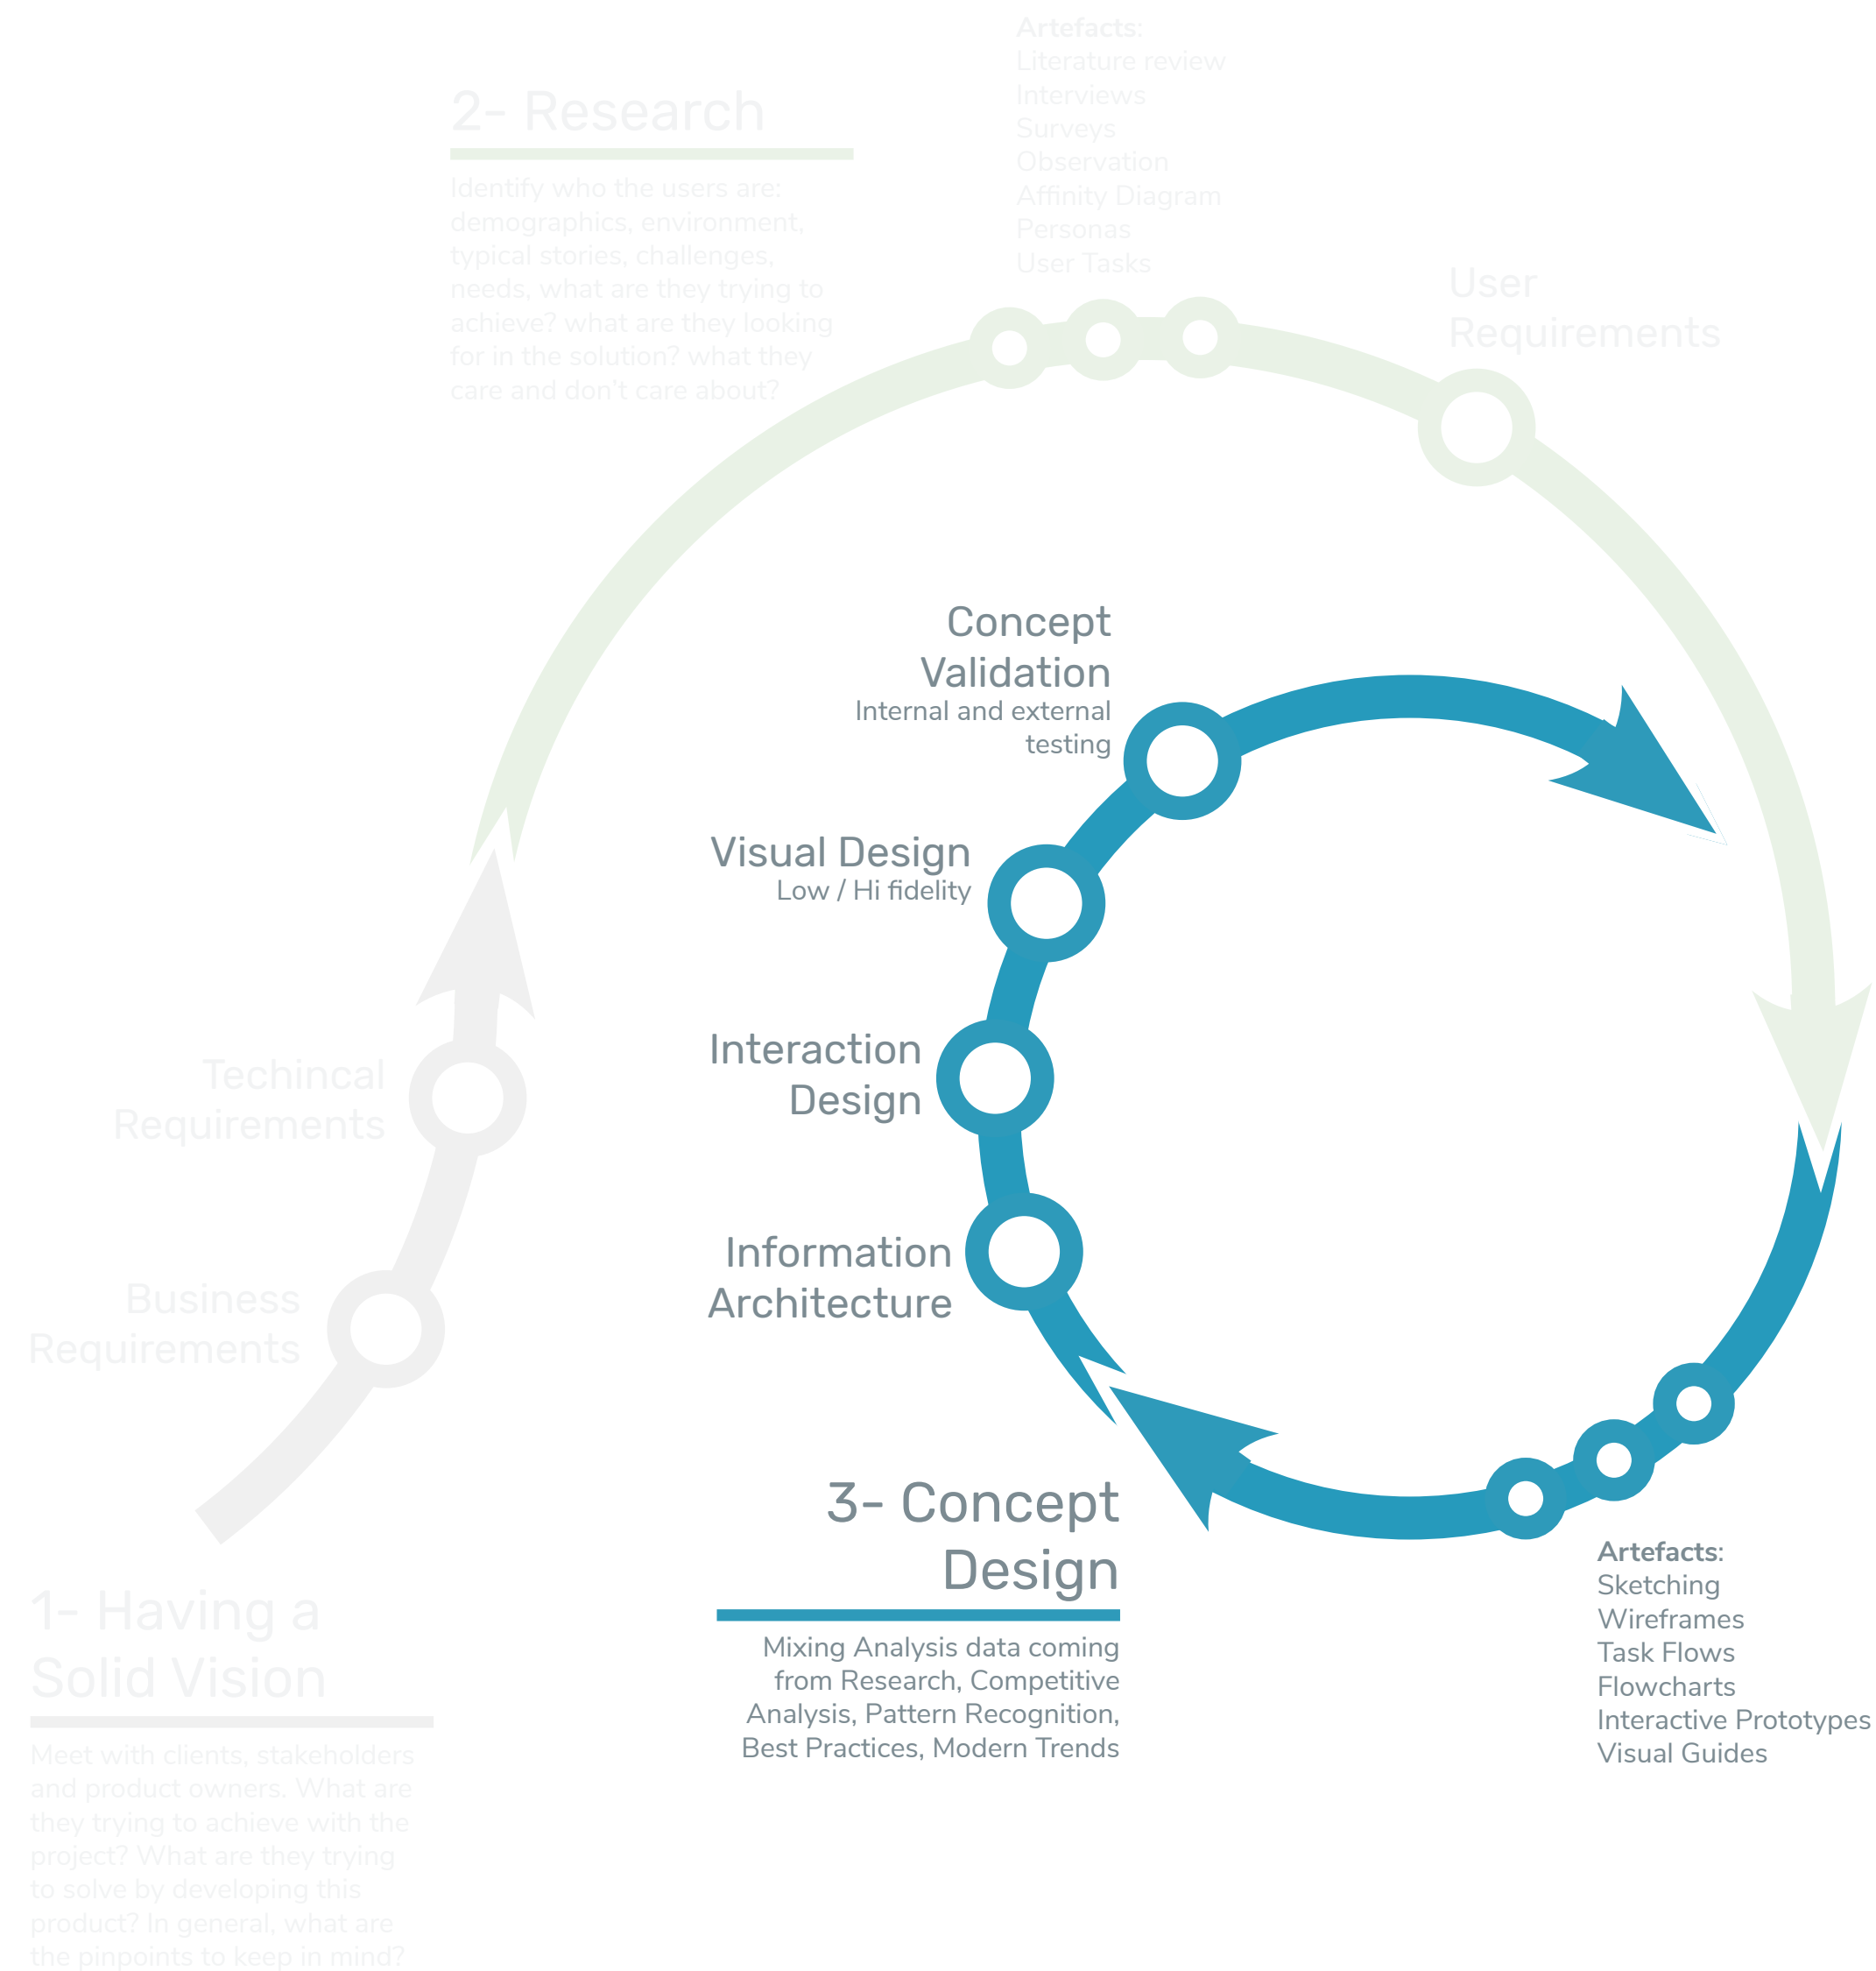

It doesn't matter which artifacts we use or in what order as long as we succeed in obtaining at the end a clear definition of the design deliverables:

- **Information Architecture**
- **Interaction Design**
- **Visual Design.**

The design phase is about proposing solution to a problem. **We are not the users** and that is why we base our assumptions and proposed solutions on **User Requirements**; also on a later stage we do some **Concept Validation** internally and later externally with the real users.

Scope of this Workshop

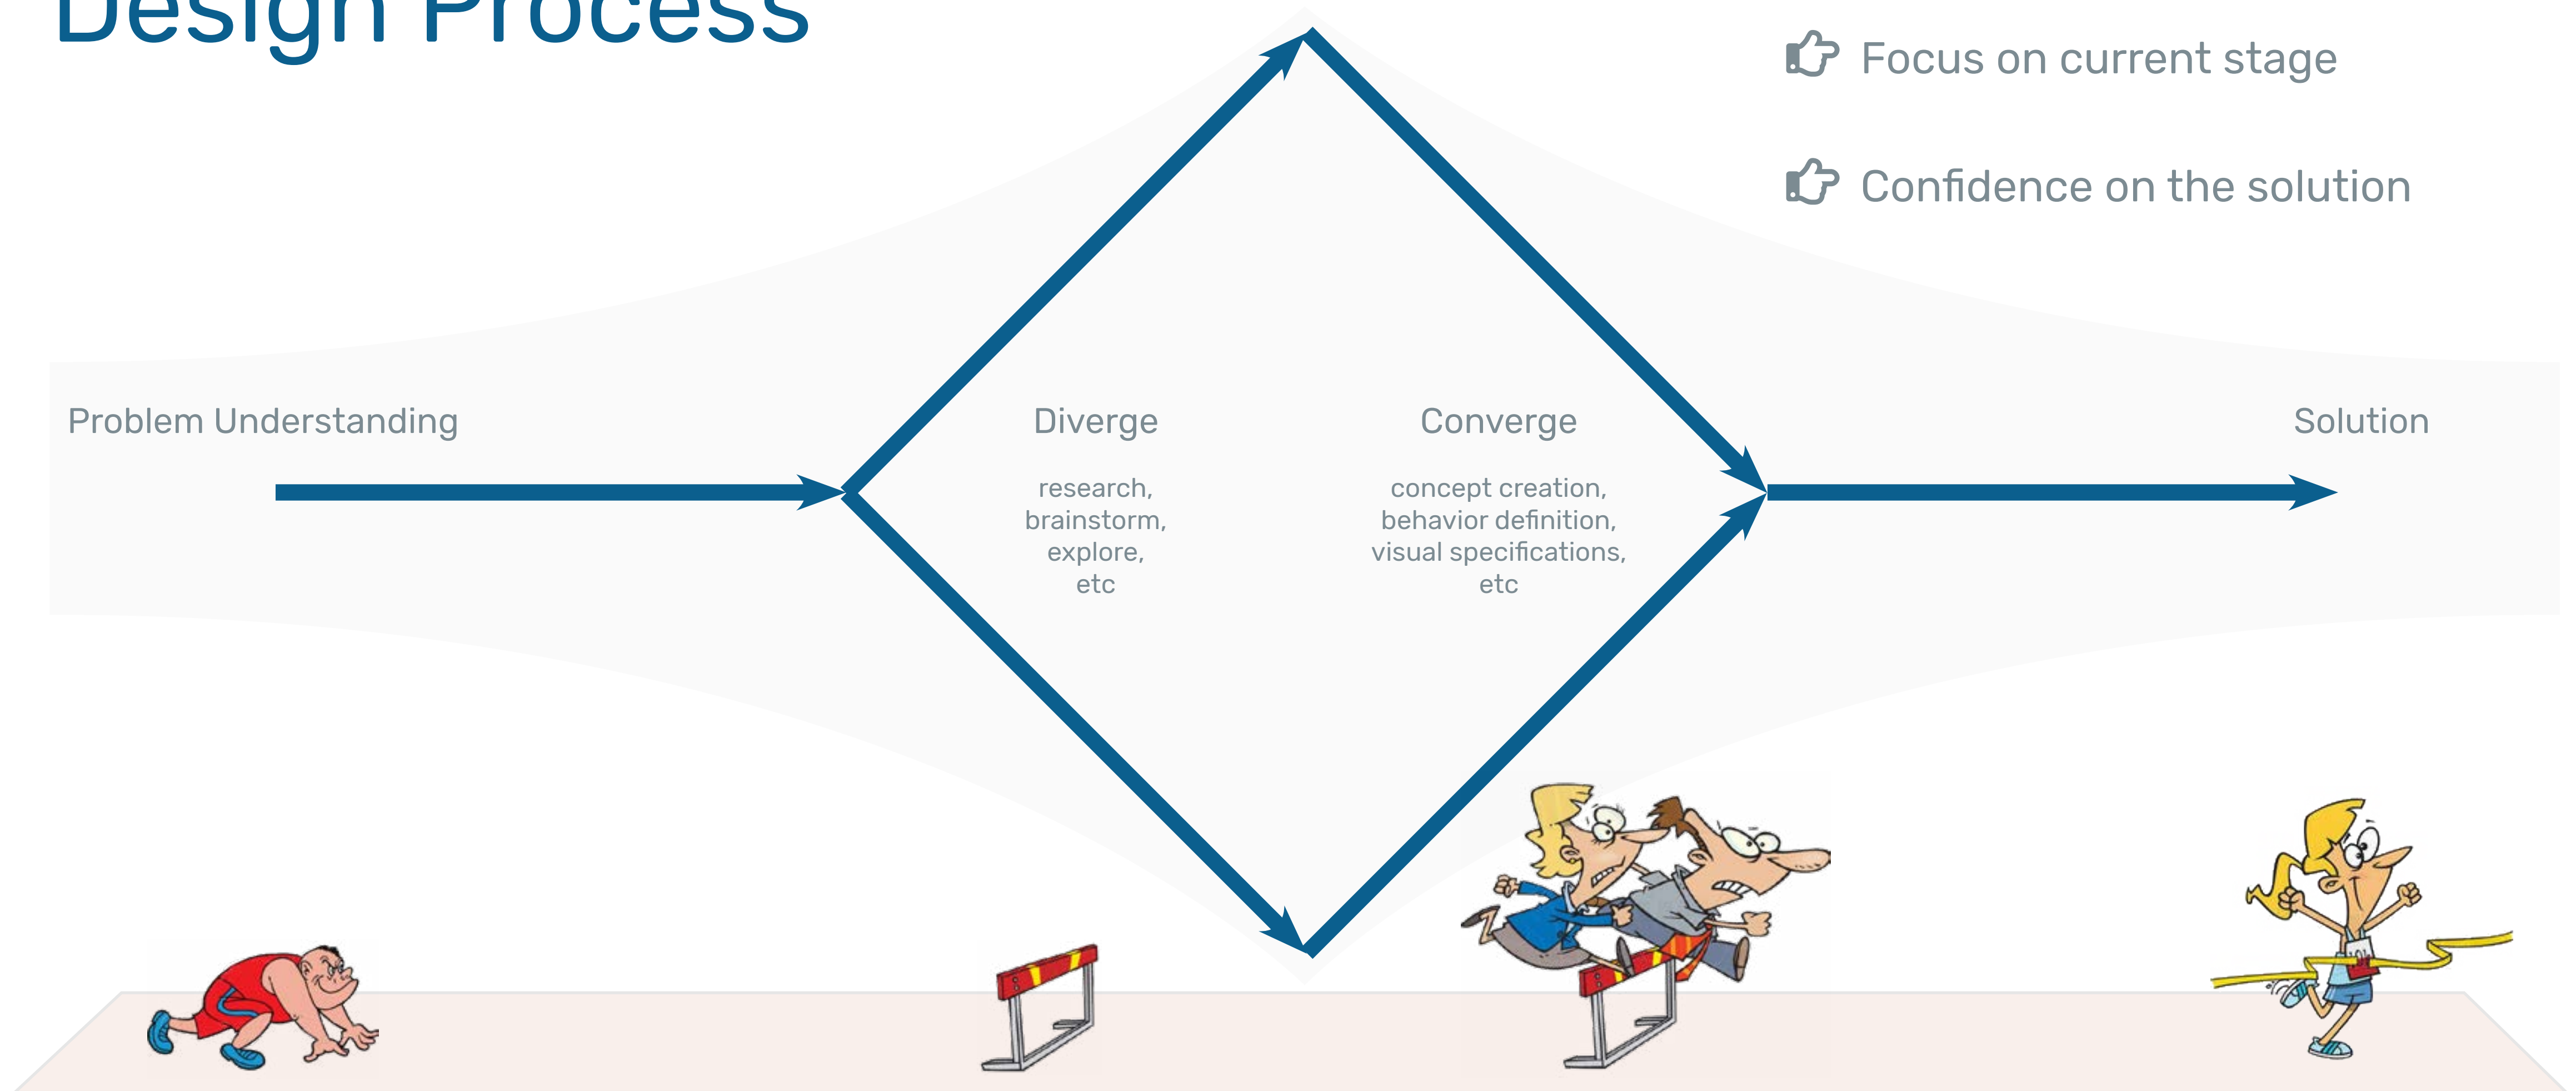

Solution Design Process

- 👍 Participate with the right mindset
- 👍 Focus on current stage
- 👍 Confidence on the solution

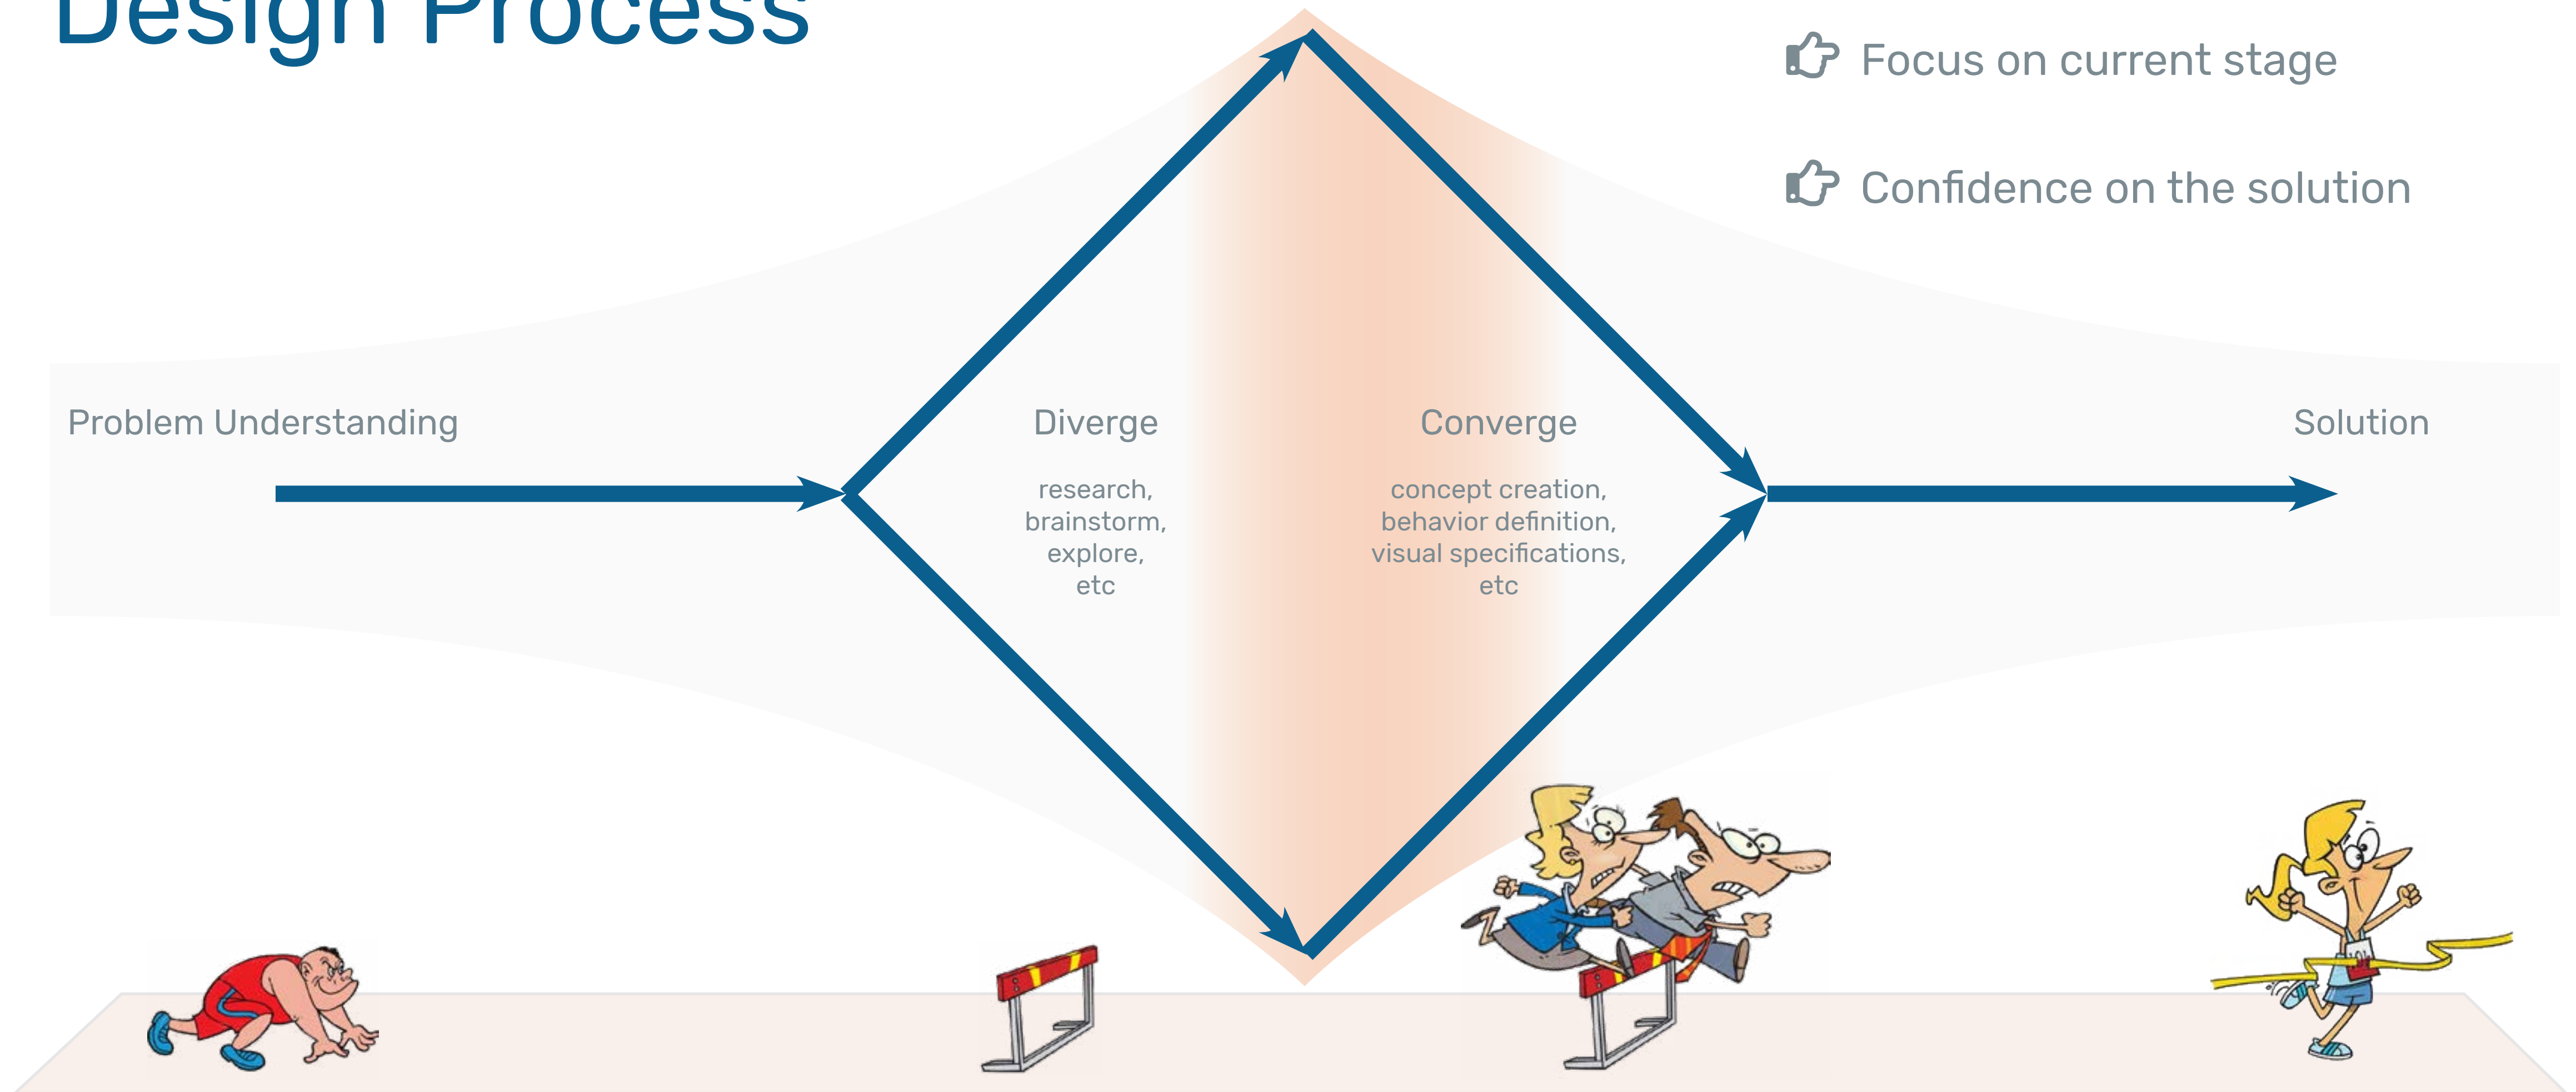

Solution Design Process

- 👍 Participate with the right mindset
- 👍 Focus on current stage
- 👍 Confidence on the solution

Solution Design Process

- 👍 Participate with the right mindset
- 👍 Focus on current stage
- 👍 Confidence on the solution

Scope of this Workshop

While been in line with the Requirements document, we will:

- ☒ Evaluate the current design direction
- ☒ Bringing more ideas to the table
- ☒ Contribute to concretize a solid proposed solution

Complementary to the Requirements document,
I asked some questions in order to know
how current users collaborate using our tools?

“How people engage on a discussion?”

“Do we need to consider data been transfered from current version?”

“What communities in GCConnex/GCCollab are?”

“What is the value in the Colleague relationship?”

“How people are using Groups?”

“Bookmarks: are they still relevant?”

“What is people searching inside GCCollab/GCconnex?”

“What COLLABORATION means to our current users?”

“How people is organizing their content?”

“What are the most used features of current GCcollab/GCconnex?”

“Does people need to express outside a group?”

“How people are using Blogs?”

“How people are using The Wire?”

“What kind of content require the attention of an user?”

“Why people create sub-groups?”

“What kind of content types do people expect to be able to have?”

...and learned some interesting facts

People need to be part of a group before being able to participate in a discussion.

There is still no definitive answer about if content will be migrated or not.

Communities are government taxonomy implemented in tags to filter information.

The Colleague relationship is impractical and annoying.

Groups are used to be organized around a subject.

Bookmarks are less and less used since 2014, replaced by browser bookmark.

People use Search mainly to find job seekers

People are part of communities and form groups to discuss.

Discussions, Search and Groups are the main features used, in that order.

People form groups and subgroups, but subgroups are confusing.

People use Blogs as a form of self expression

Except for The Wire and Blogs, all expressions are inside groups.

The Wire is used to express across all the platform

Users need to know when they were referenced

Subgroups are needed to have more granularity

What kind of content types do people expect to be able to have?

What took me to having a better understanding of
the **essence** and the **general scope**
of the project

People are part of communities and form groups to discuss.

People are part of communities and form groups to discuss.

MVP:

- ☐ Create Space
- ☐ Join Space
- ☐ Create certified Space
- ☐ Create private Space
- ☐ Identify an official Space
- ☐ Brand Space
- ☐ Manage Space membership
- ☐ Assign roles to Space members
- ☐ Delegate management rights
- ☐ Invite users
- ☐ Post content
- ☐ Upload files
- ☐ Tag content
- ☐ Organize files
- ☐ Share content with custom audience
- ☐ Co-create content
- ☐ Content version control
- ☐ Content organized by projects
- ☐ Find Space
- ☐ Find people
- ☐ Search information
- ☐ Filter content
- ☐ Receive notifications about things that require my attention
- ☐ View the latests activities
- ☐ Subscribe to #, discussions or people
- ☐ Reference users in context
- ☐ Choose target when posting content
- ☐ Restrict access to Space or content to specific audiences

People are part of communities and form groups to discuss.

MVP:

In general, users wants to:

- Be able to share ideas and get feedback
- Be part of a community with a common theme
- Be able form groups and discuss on specific subjects
- Be able to search and find things according to their interest
- Be informed about stuff that require their attention
- Work collaboratively on files

Other considerations

- * **home** could have a news feed, switching between news from my subscribed content and all the site activity
- * **bookmarks** could be replaced by **saved items**
- * **the wire** and **blogs** could be replaced by **wall posts**
- * other people could see user's posts as their **public profile**
- * **colleague** mutual relationship could be replaced by **follow** people
- * **communities** could still be a list of **tags** without necessarily been a main section

home

My stats: some stats like followers count, spaces count, etc.

Create a new post: this will replace The Wire and Blogs, we will be able to create content and control where it will be posted as well as who will be able to see it.

News feed: switch between see updates from only my subscriptions or all the site activity.

My publications: what is public about me, what my contributions are, what other people will see from me.

Saved content: replacing bookmarks, here we can organize the saved content into folders.

My events: upcoming events and tasks will be shown as part of my personal space.

Settings and Privacy: control default privacy settings when publishing content and other security variables.

people

People I follow: list of people I follow and whom content is shown in my news feed.

People following me: list of people who are subscribed to the content I produce.

Search people: search other people by name, last-name, etc.

Recommended connexions: list of other people sharing my same interests.

Clicking a person will show their public profile containing publications made by that person and some stats like followers count, spaces where the person participates, etc. Follow that person will be one important CTA.

spaces

My spaces: list of spaces initiated by me or that I am following, showing the ones with recent updates first.

Search spaces: search other spaces by name, description, tags, etc.

Recommended connexions: list of other spaces that could fit on my interests or have similar tags that other spaces I already follow.

Clicking a space will show some branded element like a banner, space's name and description, list of administrators and a news feed with all the latest activities, top contributors, etc. Follow that space will be one important CTA. Files will be a section with a file manager view of all files shared inside this space including all its groups.

groups

My groups: list of groups initiated by me or that I am following, showing the ones with recent updates first.

Search groups: search other groups by name, description, tags, etc.

Recommended groups: list of other groups that could fit on my interests or have similar tags that other groups I already follow.

Clicking a group will show some branded element like a banner showing the space where it belongs to, group's name and description, list of administrators and a news feed with all the latest activities, top contributors, etc. Follow that group will be one important CTA. Files will be a section with a file manager view of all files shared inside this group.

discussions

My discussions: list of discussions initiated by me or that I am following, showing the ones with recent updates first. Note that by participating on any discussion will automatically subscribe to them (follow) that discussion for future updates.

Search discussions: search other discussions by name, description, tags, etc.

Recommended discussions: list of other discussions that could fit on my interests or have similar tags that other groups I already follow, or have people I follow on them or are in trend, etc.

Clicking a discussion will show some branded element like a banner showing the space and group where it belongs to, discussion subject and content, list of replies and a space to contribute. Follow that discussion will be one important CTA. Files will be a section with a file manager view of all files shared inside this discussion.

Workshop Discussion

Thanks
Merci
